REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The primary reason for allowance of claims 1, 8, 11, and 12 is the inclusion of a developer container having a hollow elongated outer body with a fresh developer accommodating portion; a waste developer accommodating portion; a partition wall separating the portions, the partition wall extending from a top wall of the outer body; and the width of the developer container in the horizontal direction substantially perpendicular to the longitudinal direction, of the interior of an upper part of the fresh developer accommodating portion immediately adjacent the top wall is substantially equal to or less than a corresponding width of a lower part of the fresh developer accommodating portion everywhere below the upper part of the fresh developer accommodating portion. This is found in all of claims 1, 8, 11, and 12, but not disclosed nor suggested by the prior art of record.

The primary reason for allowance of claims 2-5 and 9 is the inclusion of a guide member extending inwardly of the waste developer accommodating portion; a waste developer lid provided in the waste developer accommodating portion, the waste developer lid being slidably guided by the guide member so as to open and close the collection opening; a resilient urging mechanism that urges the waste developer lid in the direction in which the waste developer lid closes the collection opening, the waste developer lid moves away from the collection opening overcoming the force of the resilient urging mechanism when the waste developer discharging opening receives the developer discharging mechanism; and the guide member covers at least the collection

opening from above in a state where the developer container is attached to the print process cartridge. This is found in all of claims 2-5 and 9, but not disclosed nor suggested by the prior art of record.

The primary reason for allowance of claims 6, 7, and 10 is the inclusion of a discharging mechanism having a waste developer discharging opening through which the waste developer is discharged, and a discharging lid that opens and closes the waste developer discharging opening; the discharging lid opens the waste developer discharging opening of the developer discharging mechanism when the waste developer discharging opening of the developer discharging mechanism enters into the waste developer accommodating portion through the collection opening, and the discharging lid closes the waste developer discharging opening when the waste developer discharging opening of the developer discharging mechanism moves out of the waste developer accommodating portion through the collection opening. This is found in all of claims 6, 7, and 10, but not disclosed nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mercer (284) discloses a service unit with a fresh toner storage and a waste toner storage.
